Mr. Gennady Lipki  
Aust Light Tower

Dear Gennady,

We have had our light tower for over six years. What can we say but Wow, it has been a very utilised piece of equipment whether it be at community events or used during operational events where lighting a scene is required.

Because the tower height is adjustable through an easy application of undoing the zip, the extra height allows us to work on house roofs easily.

It is so easy to set up and pack away a one person job.

Because of the material used in the tower the light gives a softer glow thus making it easier to work in, rather than the harsh flood lights that are on the market.

Regards

Dean Currey
